

QUARTERLY FACTSHEET As of 12/31/23

Investment Strategy

The investment seeks long-term growth of capital. The fund principally invests (normally at least 80% of its net assets) in equity securities of domestic and foreign companies of any size engaged in all sectors of the gold mining and precious metals industries. A foreign company is one that is organized under the laws of a foreign country and has the principal trading market for its stock in a foreign country. The fund is non-diversified

Manager Biography

Gregory M. Orrell since 12/1996 Orrell is the principal portfolio manager of OCM and has been president of the company since 1991.

Investment Advisor

Orrell Capital Management is a specialty money manager in the precious metals equity sector. In addition to advising the OCM Gold Fund, the fund manages private and institutional accounts.

Fund Objective:

The Fund seeks long-term capital appreciation by investing primarily in common stocks of gold and silver mining companies.

Investor Profile:

The OCM Gold Fund is designed for investors desiring diversification of their investment portfolio with a gold related asset to hedge against currency devaluation or inflation and are willing to accept the risks and volatility associated with investment in gold and gold shares.

QUARTERLY FACTSHEET

As of 12/31/23

Important Disclosures

The fund invests in gold and other precious metals, which involves additional risks, such as the possibility for substantial price fluctuations over a short period of time and may be affected by unpredictable international monetary and political developments such as currency devaluations or revaluations, economic and social conditions within a country, trade imbalances or trade or currency restrictions between countries. The prices of gold and other precious metals may decline versus the dollar, which would adversely affect the market prices of the securities of gold and precious metals producers. The Fund may also invest in foreign securities which involve greater volatility and political, economic, and currency risks and differences in accounting methods. The Fund is non-diversified, meaning it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. Prospective investors who are uncomfortable with an investment that will fluctuate in value should not invest in the Fund. The Fund's Total Annual Operating Expenses for the OCM Gold Fund Investor Class and Atlas Class are 2.32% and 1.82% respectively. Please review the Fund's Prospectus for more information regarding the Fund's fees and expenses. The **Philadelphia Stock Exchange Gold/Silver Index (XAU)** is a capitalization-weighted index featuring sixteen widely held securities in the gold and silver mining industry and is generally viewed as a reliable indicator of the performance of the common stock of companies in the gold and silver mining industry. **The S&P 500 Index** is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. You cannot invest directly in an index, and, unlike the Fund, an index does not incur fees and expenses. There is no assurance that the Fund will achieve its investment objective.

Past performance is no guarantee of future results

Beta is a measure of relative risk and the slope of regression. **Standard deviation** measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe ratio indicates better risk-adjusted performance. **Max drawdown** is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio before a new peak is achieved. **Value At Risk (VaR)** T calculates the potential loss of an investment with a given time frame and confidence level. **The Sortino ratio** is very similar to the Sharpe ratio in that it is trying to capture the risk of an investment over a certain period. However, the Sortino Ratio does this by capturing the "downside" risk, by ignoring the upside volatility. The theory being investors should only be concerned with harmful (negative) volatility.
